

How to evaluate a source - the OPVL method

What is OPVL

OPVL is a very common method used by many people around the world to evaluate both primary and secondary sources. OPVL stands for Origin, Purpose, Value and Limitations these parts of the OPVL analysis method aim to thoroughly analyze and evaluate a source in relation to a specific research question that is being investigated. By learning this method of source evaluation, it will give you a very good sense of what sources you should chose to trust and include in your research and which ones you shouldn't the method will help you create more accurate and precise works/ essays/ presentations and more as you will have the right research with the right sources fitting your task/ topic question.
